

Astroved Sriclone project documentation summary

ASTROVED SRICLONE - Project Documentation

PROJECT OVERVIEW

Repository: `Selva03-t/astroved-sriclone`

Technology Stack: Next.js 16.2.4, React 19.2.4, TypeScript, TailwindCSS, MongoDB

Language Composition: 99.6% TypeScript, 0.4% Other

Live URL: <https://astroved-sriclone.vercel.app>

Status: Active Development (Last updated May 13, 2026)

A. ARCHITECTURE & TECH STACK

Frontend Framework

- Next.js 16.2.4 - Full-stack React framework with App Router
- React 19.2.4 - UI component library
- TypeScript 5 - Type-safe JavaScript
- TailwindCSS 4.2.2 - Utility-first CSS framework
- Framer Motion 12.38.0 - Animation library for React

Backend & Database

- MongoDB 7.1.1 - NoSQL database for data persistence
- Node.js - Runtime environment (via Next.js)

Authentication & Security

- jose 6.2.2 - JWT (JSON Web Token) handling
- bcryptjs 3.0.3 - Password hashing and encryption
- Next.js Middleware - Route protection and auth verification

UI & Utilities

- @heroicons/react 2.2.0 - Icon library
- react-international-phone 4.8.0 - International phone number input
- autoprefixer 10.5.0 - CSS vendor prefix automation
- postcss 8.5.10 - CSS transformation tool
- Font Awesome 6.5.1 - Additional icons via CDN

B. CORE FEATURES & FUNCTIONALITY

1. User Authentication System

- Login/Signup Pages - Email and password-based authentication
- Forgot Password - Password recovery mechanism
- JWT Token Management - 7-day expiration tokens stored in secure HTTP-only cookies
- User Profiles - Store user data: name, email, phone, WhatsApp, country
- Password Security - bcryptjs hashing for password storage

2. Spiritual Services Platform

Users can browse and interact with:

- 🙏 Pujas - Religious rituals and ceremonies
- 🎁 Chadhava Offerings - Traditional spiritual offerings
- 🏛️ Temples - Temple directory and information

- 🕒 Panchang - Hindu astronomical calendar and auspicious dates
- ✨ Astrologers - Astrologer profiles and consultations
- 📖 Library - Spiritual and astrological knowledge base
- 🛒 Store - E-commerce for spiritual products
- 🧮 Astro Tools - Astrological calculation tools

3. Booking System

- Service Booking - Users can book pujas and chadhava offerings
- Booking Management - View and manage user bookings
- Booking Details - Store booking type, amount, items, customer info
- Booking Status Tracking - Track booking states (pending, success, etc.)

4. Payment Processing

- Payment Pages - Dedicated payment interface
- Order Tracking - Order ID generation and tracking
- Payment Integration - Amount and transaction management
- Secure Transactions - Middleware protection for payment routes

5. Astro Tools & Calculators

Specialized astrological calculations:

- Janma Rashi - Birth zodiac sign calculation
- Lagna - Ascendant/Lagna determination
- Mangal Dosha - Mars defect analysis
- Nakshatra - Birth star/constellation calculation
- Panchang - Astronomical calendar and auspicious timing

6. Admin Dashboard

- Statistics Dashboard - Real-time content metrics
 - Special Pujas count
 - Pujas count
 - Temples count
 - Chadhava count
 - Library items count
 - Store products count
 - Reviews count
- Content Management - Admin can add/edit/manage all services
- Admin Login - Separate admin authentication with role-based access
- Quick Actions - Fast access to manage pujas, temples, and other content

7. AI Assistant

- Floating Chat Widget - AI-powered customer assistance
- Context-Aware - Hidden on auth and admin pages

C. ROUTING STRUCTURE

User-Facing Routes

/	→ Dashboard (home redirects here)
/dashboard	→ User dashboard
/profile	→ User profile management
/about	→ About page
/contact	→ Contact page

/temples	→ Temple listing
/temples/	→ Temple details
/puja	→ Puja listing
/puja/[slug]	→ Puja details
/chadhava	→ Chadhava offering listing
/chadhava/[slug]	→ Chadhava details
/astrologers	→ Astrologer listing
/astrologers/[id]	→ Astrologer profile
/consultation	→ Consultation booking
/booking	→ Booking management
/bookings	→ User's bookings list
/payment	→ Payment processing (Protected)
/library	→ Spiritual library
/store	→ E-commerce store
/panchang	→ Panchang/Calendar
/astro-tools	→ Astrological tools

Authentication Routes

/auth/login	→ User login
/auth/signup	→ User registration
/auth/forgot-password	→ Password recovery

Admin Routes

/admin	→ Admin dashboard (Protected)
/admin/login	→ Admin authentication
/admin/pujas	→ Manage pujas
/admin/temples	→ Manage temples
/admin/chadhava	→ Manage chadhava offerings
/admin/store	→ Manage store products
/admin/library	→ Manage library content
/admin/panchang	→ Manage panchang data
/admin/astro-tools	→ Manage astro tools
/admin/reviews	→ Manage user reviews

D. API ENDPOINTS

Authentication APIs

POST	/api/auth/login	→ User login
POST	/api/auth/signup	→ User registration
POST	/api/auth/logout	→ User logout
POST	/api/auth/forgot-password	→ Password reset

Booking APIs

POST /api/bookings/create → Create new booking (Protected)
GET /api/bookings/me → Get user's bookings (Protected)

Admin APIs

GET /api/admin/stats → Get dashboard statistics
GET /api/admin/pujas → List pujas
POST /api/admin/pujas → Create puja
PUT /api/admin/pujas/:id → Update puja
DELETE /api/admin/pujas/:id → Delete puja

GET /api/admin/temples → List temples
POST /api/admin/temples → Create temple
PUT /api/admin/temples/:id → Update temple
DELETE /api/admin/temples/:id → Delete temple

GET /api/admin/chadhava → List chadhava
POST /api/admin/chadhava → Create chadhava
PUT /api/admin/chadhava/:id → Update chadhava
DELETE /api/admin/chadhava/:id → Delete chadhava

GET /api/admin/store → Manage store
GET /api/admin/library → Manage library
GET /api/admin/panchang → Manage panchang
GET /api/admin/astro-tools → Manage astro tools
GET /api/admin/reviews → Manage reviews

Data APIs

GET /api/temple/* → Temple data endpoints
GET /api/panchang/* → Panchang calculation endpoints
GET /api/janma-rashi/* → Birth zodiac calculations
GET /api/lagna/* → Ascendant calculations
GET /api/mangal-dosha/* → Mars defect analysis
GET /api/nakshatra/* → Birth star calculations

E. DATABASE SCHEMA (MongoDB Collections)

Users Collection

```
javascript
{
  _id: ObjectId,
  name: String,
  email: String (unique, lowercase, trimmed),
  passwordHash: String (bcrypt encrypted),
  phone: String,
  whatsapp: String,
  country: String,
  createdAt: Date,
  updatedAt: Date
}
```

Bookings Collection

```
javascript
{
  _id: ObjectId,
  userId: ObjectId (ref: users),
  customerName: String,
  customerEmail: String,
  bookingType: String ('puja' | 'chadhava'),
  title: String,
  amount: Number,
  items: Array,
  orderId: String,
  status: String ('pending' | 'success' | 'failed'),
  bookingDate: Date,
  createdAt: Date
}
```

Pujas Collection

```
javascript
{
  _id: ObjectId,
  slug: String (unique),
  title: String,
  description: String,
  price: Number,
  image: String,
  details: String,
  createdAt: Date,
  updatedAt: Date
}
```

Other Collections

- temples - Temple information
- chadhava - Chadhava offerings
- astrologers - Astrologer profiles
- library - Library content
- store - Store products
- panchang - Astrological calendar data
- astro_tools - Astrological calculation data
- reviews - User reviews

F. COMPONENT ARCHITECTURE

Layout Components

```
src/components/layout/
├── GlobalChrome.tsx    → Global header, footer, AI assistant wrapper
├── Footer.tsx         → Site footer
├── Header.tsx         → Navigation header
├── Navbar.tsx         → Navigation bar
└── Container.tsx      → Layout container wrapper
```

Feature Components

src/components/booking/
├── BookingForm.tsx → Service booking form
└── PaymentSection.tsx → Payment UI

src/components/auth/
└── Login.tsx → Login UI component

src/components/admin/
├── Sidebar.tsx → Admin sidebar navigation
└── ContentManager.tsx → Content management UI

src/components/astrologer/
├── AstrologerCard.tsx → Individual astrologer card
└── AstrologerList.tsx → List of astrologers

src/components/ui/
├── Button.tsx → Reusable button component
├── Card.tsx → Card container
├── Input.tsx → Form input field
├── Modal.tsx → Modal dialog
├── Loader.tsx → Loading spinner
├── EmptyState.tsx → Empty state UI
└── AIAssistant.tsx → AI chat widget

G. AUTHENTICATION & SECURITY

Authentication Flow

1. User submits email/password on login page
2. Backend verifies credentials against MongoDB
3. Password verified using bcryptjs comparison
4. JWT token generated with 7-day expiration
5. Token stored in HTTP-only cookie (secure, sameSite: 'lax')
6. Token sent with every protected route request

Route Protection

- Middleware-based - `src/middleware.ts` handles all route protection
- Admin Routes - Requires `adminToken` cookie
- Payment Routes - Requires `userToken` cookie
- Booking Routes - Requires valid `userToken`

Protected Paths

```
javascript
matcher: [
  '/admin/:path*',
  '/booking/:path*',
  '/bookings/:path*',
  '/payment/:path*'
]
```

Security Measures

- JWT Secret stored in environment variables
- Passwords hashed with bcryptjs
- HTTP-only cookies prevent XSS attacks
- Secure cookie flag for production
- SameSite: 'lax' prevents CSRF attacks

H. MIDDLEWARE & INTERCEPTORS

Middleware Functions (`src/middleware.ts`)

1. Admin Route Protection - Validates admin token before accessing admin panel
2. User Route Protection - Validates user token for payment and booking pages
3. JWT Verification - Uses jose library to verify token integrity
4. Redirect Logic - Redirects unauthenticated users to login with callback URL

Error Handling

- Invalid tokens → Redirect to login
- Expired tokens → Redirect to login
- Missing tokens → Redirect to login with callback URL for redirect after login

I. STATE MANAGEMENT & CONTEXTS

Contexts (`src/context/`)

- User authentication context
- Booking state context
- Admin panel context
- Global app state

Custom Hooks (`src/hooks/`)

- `useAuth()` - Authentication state and methods
- `useBooking()` - Booking management
- `useAdmin()` - Admin-specific functionality

Providers (`src/app/Providers.tsx`)

- Wraps entire application with context providers
- Initializes global state and authentication

J. STYLING & DESIGN

CSS Framework

- TailwindCSS 4 - Utility-first styling
- Custom CSS - Global styles in `src/app/globals.css`
- Color Scheme:
 - Primary: `#6869F9` (Blue)
 - Secondary: `#5657e8` (Purple)
 - Dark: `#241a46` (Deep purple)
 - Border: `#e8e2ff` (Light purple)

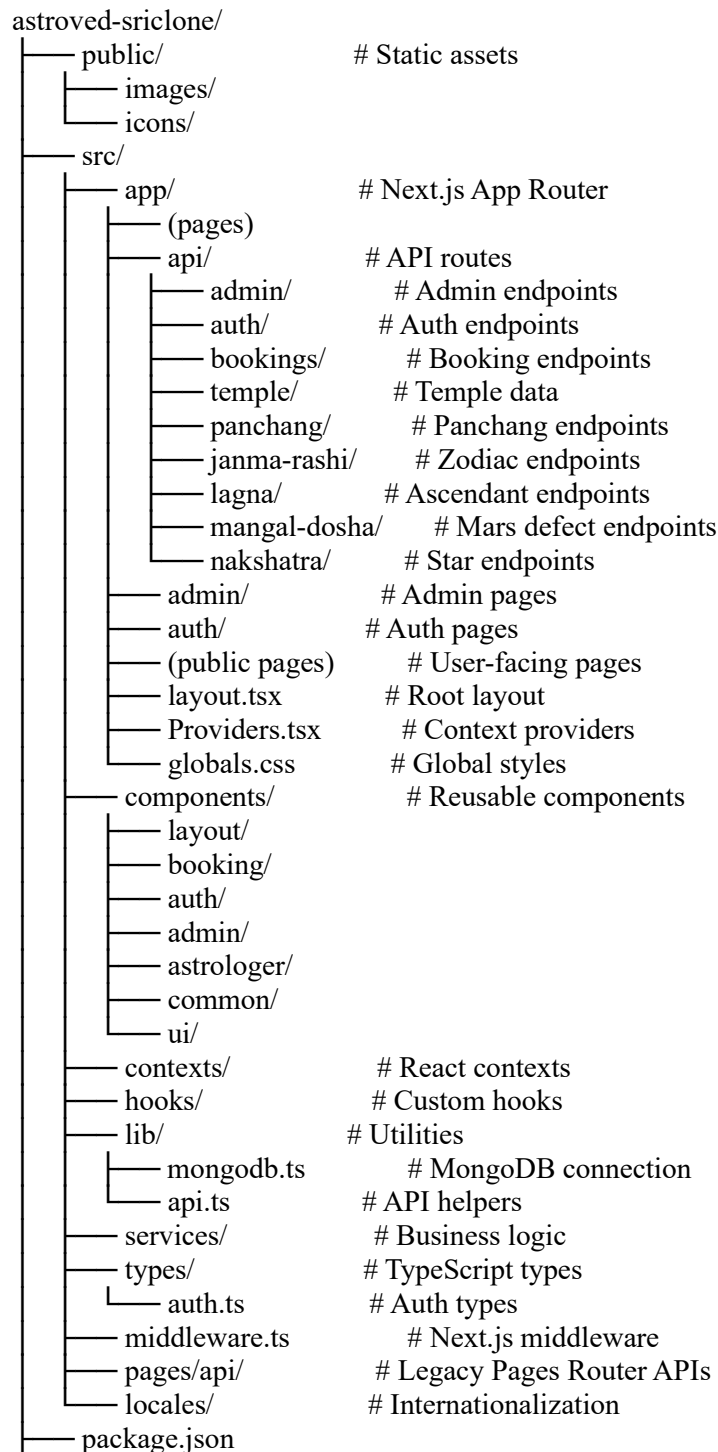

Responsive Design

- Mobile-first approach
- Breakpoints: sm, md, lg (Tailwind standard)
- Grid layouts for dashboard and listings

Animations

- Framer Motion for smooth transitions
- Skeleton loaders for data loading states
- Hover effects on interactive elements

K. FILE STRUCTURE

```
├── tsconfig.json
├── .env.local          # Environment variables
└── next.config.js     # Next.js config
```

L. ENVIRONMENT VARIABLES

Required Configuration

```
env
MONGODB_URI=<mongodb-connection-string>
JWT_SECRET=<jwt-secret-key>
NODE_ENV=production|development
```

Defaults

- JWT_SECRET defaults to `astroved\_secret\_key\_123` (development only)
- NODE_ENV checked for cookie security settings

M. BUILD & DEPLOYMENT

Build Process

```
bash
npm run dev    # Start development server
npm run build  # Build for production
npm start     # Start production server
npm run lint   # Run ESLint
```

Deployment

- Hosted on: Vercel
- Repository: GitHub (Selva03-t/astroved-sriclone)
- Live URL: <https://astroved-sriclone.vercel.app>

N. USER JOURNEY - COMPLETE FLOW

New User Journey

1. Visit homepage → Redirected to /dashboard
2. Click "Sign Up" → /auth/signup page
3. Fill registration form → POST /api/auth/signup
4. Account created in MongoDB
5. Auto-login with JWT token
6. Redirected to dashboard

Service Booking Journey

1. Browse services (pujas, chadhava, etc.)
2. Click on service → View detail page with [slug]
3. Click "Book Now" → Redirected to /booking
4. Middleware checks userToken
5. Fill booking form → POST /api/bookings/create

6. Booking saved to MongoDB
7. Proceed to payment → /payment (protected)
8. Complete transaction
9. View booking confirmation
10. Access booking history in /bookings

Admin Content Management Journey

1. Visit /admin/login
2. Login with admin credentials
3. Redirected to /admin dashboard
4. View statistics (from /api/admin/stats)
5. Navigate to manage pujas (/admin/pujas)
6. Add/Edit/Delete content
7. Changes reflected in MongoDB

O. REAL-TIME FEATURES & UPDATES

Dynamic Data Loading

- Dashboard stats fetched on page load
- Bookings retrieved from user token userId
- Admin stats computed from database collection.

Astrological Calculations

- Janma Rashi calculated from birth date
- Lagna determined from birth time & location
- Mangal Dosha analyzed from birth chart
- Nakshatra identified from exact birth time
- Panchang data from astronomical calculations

P. EXTERNAL INTEGRATIONS

Third-Party Libraries

- Font Awesome 6.5.1 - Icon library (CDN)
- Framer Motion - Smooth animations
- react-international-phone - Phone input formatting

No Current Integrations

- Payment gateway (skeleton in place)
- Email service (not implemented)
- SMS notifications (not implemented)
- Analytics (not integrated)

Q. ERROR HANDLING & VALIDATION

Client-Side

- Form validation on input
- Required field checks
- Email format validation
- Phone number format validation (international)

Server-Side

- Email/Password required check
- bcryptjs password comparison
- JWT token verification
- Database query error handling

Error Responses

```
javascript
{
  success: false,
  error: "Error message",
  status: 400 | 401 | 500
}
```

R. TESTING & QUALITY

Code Quality

- ESLint 9 - Code linting
- TypeScript 5 - Type checking
- Next.js Config - Next.js best practices

No Test Suite

- Currently no Jest/Vitest tests
- No E2E tests configured

S. PERFORMANCE OPTIMIZATIONS

Next.js Features

- App Router - Fast navigation with client-side routing
- Image Optimization - Next.js Image component ready
- Code Splitting - Route-based bundle splitting
- Caching - HTTP caching headers

Frontend

- TailwindCSS - Optimized CSS output
- Font Awesome CDN - Distributed icon delivery

Backend

- MongoDB Connection Pooling - Reusable client promise
- JWT Token Caching - Tokens stored in HTTP-only cookies

T. SECURITY CONSIDERATIONS

Current Implementation

- ✓ Password hashing with bcryptjs
- ✓ JWT-based authentication
- ✓ HTTP-only secure cookies
- ✓ CSRF protection with SameSite
- ✓ Environment variable secrets
- ✓ Route-level middleware protection

Recommendations

- ⚠ Implement HTTPS everywhere
- ⚠ Add rate limiting on auth endpoints
- ⚠ Enable CORS restrictions
- ⚠ Implement refresh token rotation
- ⚠ Add API request validation/sanitization
- ⚠ Implement audit logging

U. INTERNATIONALIZATION (i18n)

Locales Directory

- `src/locales/` exists but contents not shown
- Likely contains translation files for multiple languages

Phone Input

- `react-international-phone` supports multiple countries
- User country stored in profile

V. FUTURE EXPANSION AREAS

Payment Gateway

- Currently scaffolded, needs implementation
- Razorpay, Stripe, or similar integration

Notification System

- Email confirmations
- SMS alerts
- Push notifications

Advanced Features

- Real-time booking updates (WebSocket)
- Live chat support (beyond AI assistant)
- Video consultations with astrologers
- Advanced filtering and search
- User reviews and ratings

W. ADMIN FUNCTIONALITIES

Dashboard Metrics

- Special Pujas count
- Regular Pujas count
- Temples count
- Chadhava offerings count
- Library content count
- Panchang entries count
- Astro Tools count
- Store products count
- User reviews count

Content Management

- Add/Edit/Delete pujas
- Manage temples
- Manage chadhava offerings
- Store product management
- Library content management
- Panchang data management
- Astro tools management
- Review moderation

Quick Actions

- Direct links to add new pujas
- Quick access to manage temples

X. EXTENDED FEATURES CHECKLIST

- ☒ User authentication (Email/Password)
- ☒ Role-based access (User/Admin)
- ☒ Service browsing (Pujas, Temples, Chadhava, etc.)
- ☒ Booking system
- ☒ User profiles
- ☒ Admin dashboard
- ☒ Content management
- ☒ Route protection with middleware
- ☒ JWT token management
- ☒ MongoDB integration
- ☒ Password hashing
- ☒ AI Assistant widget
- ☒ Astrological calculators
- ☐ Payment gateway integration
- ☐ Email notifications
- ☐ SMS alerts
- ☐ Real-time features
- ☐ Advanced analytics

Y. CONFIGURATION & SETUP

Dependencies Installation

```
bash
npm install
```

Environment Setup

```
bash
Create .env.local file
MONGODB_URI=your_mongodb_uri
JWT_SECRET=your_secret_key
NODE_ENV=development
```

Development Server

```
bash
npm run dev
Server runs on http://localhost:3000
```

Production Build

bash

npm run build

npm start

Z. SUMMARY

Astroved Sri Clone is a comprehensive **full-stack Next.js spiritual services platform** that combines:

1. E-commerce capabilities (pujas, chadhava, store)
2. Astrological tools (Janma Rashi, Lagna, Mangal Dosha, Nakshatra, Panchang)
3. Service booking system with payment processing
4. User authentication with role-based access
5. Admin content management dashboard
6. AI assistant for customer support
7. MongoDB backend for data persistence
8. Modern tech stack (Next.js 16, React 19, TypeScript, TailwindCSS)

The project serves as a platform connecting spiritual seekers with astrologers, puja services, temple information, and astrological knowledge, with a robust admin system for content management and user engagement.

This comprehensive documentation covers every aspect of the project from A-Z. Would you like me to dive deeper into any specific area?
